

As the number of number of attributes increases, so do the number of sets that can be made.

This also increases the number of cards that would be in a deck.

If you only had one shape, but 4 different attributes, there would be fewer unique sets, than if there were 3 shapes.

The Study of Attributes and Subsets

There is likely a logical number of attributes that should be in a game. However, with 4 attributes and 3 different values, there are 81 unique cards, and 1080 unique sets that can be played.
